N 400

39.3% N (393g/L)

Formulated Nitrogen Solution for Rapid Uptake

Nitrogen uptake starts early and supply is particularly important to maximise new root and shoot development. Without a continuous supply of nitrogen, growth will slow and yields will suffer dramatically.

N 400 is a high analysis formulated liquid nitrogen that enables rapid uptake by plants via ground, fertigation or foliar application. It is easily absorbed via roots and leaves and enhances new root development.

Containing a mixture of ammonium and nitrate nitrogen which has a low potential for volatilisation and requires no incorporation, N 400 therefore offers application flexibility under dry conditions prior to rainfall.

N 400 has good tank-mix compatibility and is easy to mix and use, therefore minimal labour is required at application.

Application & Timing

- All fruit crops: 10-20L/ha (Post harvest application only)
- Arable crops: Seek local advice

N400	
Total Nitrogen	min. 39.3% w/v
Ammoniacal nitrogen	9.4 - 10.2% w/v
Nitric nitrogen	9.4- 10.2% w/v
Ureic nitrogen	18.8 - 20.4% w/v
Biuret	<0,5% w/v

Benefits:

- Promotes early growth
- Extremely high absorption rate by crop
- Low biuret content
- Easy to use and apply
- Widely tank mixable with other crop sprays
