YaraVita™ BUD BUILDER FL

Enhancing bud burst, flowering & fruit set in your fruit crop

YaraVita BUD BUILDER FL is a highly formulated suspension concentrate containing 22 g/l phosphorus, 42 g/l calcium, 145 g/l magnesium, 100 g/l zinc and 30 g/l boron.

Built for Purpose

YaraVita BUD BUILDER FL is the latest foliar product to be released by Yara's Product Development team in Pocklington, England. Developed specifically for application on to fruit crops pre-flowering and post harvest, the product is designed to enhance bud burst, flowering and fruit set.

The basis of this 'timing specific approach' is that the product supplies the key nutrients that the fruit crop requires at an important growth stage, in the ratio that they are required, thus maintaining the correct nutrient balance for optimal yield and quality.

In doing this, YaraVita BUD BUILDER FL helps the crop meet its nutritional requirement at a key growth stage in a single product application, regardless of the nutritional status of the soil.

This removes the need to identify specific nutrient deficiencies in the soil or the crop and takes out the complexity of product selection.

User Friendly

One of the main advantages of using a timing specific product approach is that it removes the need to identify nutritional requirements at key growth stages and removes the need for multi applications of several products.

For example, the high specification of YaraVita Bud Builder FL is such that a single application of 5 l/ha is the equivalent to applying:

0.8 l/ha YaraVita SENIPHOS (P)
1.3 l/ha YaraVita STOPIT (Ca)
2.4 l/ha YaraVita MAGFLO 300 (Mg)
0.7 l/ha YaraVita ZINTRAC 700 (Zn)
1.0 l/ha YaraVita BORTRAC 150 (B)

A secondary advantage of only having a single product to apply rather than several is the improved tank mix profile. The more products that are put into the spray tank, the more chance there is of a problem occurring.

Unique Technology

YaraVita BUD BUILDER FL is part of a new generation of boron containing suspension concentrate products developed by Yara's team of Chemists in the UK. Until recently, it was not possible to get boron into a suspension concentrate in reasonable amounts, particularly if there were large quantities of other nutrients present.

YaraVita BUD BUILDER FL contains 5 key nutrients required for bud burst, flowering and fruit set. These nutrients total 367 g/l and a single application of this one product can equate to co-applications of 5 individual products.

YaraVita BUD BUILDER FL is formulated to give an unmatched tank mix profile. Tank mix advice can be found online at www.tankmix.com.
