

# YaraVita™

## Ezy-Thin™

### Blossom thinner for use with pomefruit and stonefruit crop

#### Active ingredient:

Ammonium Thiosulphate (ATS)	782 g/l
as a soluble concentrate	

### Why Foliar Apply?

Foliar sprays ensure precise application of the right nutrient mix at the right time, and can be specifically targeted to the leaf or fruit, to suit an immediate crop need.

Foliar application also provides nutrients for immediate uptake by the leaves or fruits. As a result, the grower is not reliant on the right soil, pH or growing media conditions and can quickly put the crop back on course.

Ammonium Thiosulphate is commonly applied as a blossom thinner to pomefruit and stonefruit, normally when 80% of flowers are open. Further applications can be made to remove other unwanted flowers. Seek local agronomic advice.

The information provided is accurate to the best of Yara's knowledge and belief. Any recommendations are meant as a guide and must be adapted to suit local conditions.

### Benefits

- Formulated for safe application at critical growth stages to satisfy crop requirements
- Widely tank mixable with other crop sprays. Visit [www.tankmix.com](http://www.tankmix.com) for details
- Proven, reliable performance. Tried and tested on a wide range of crops around the world
- High quality, consistent products. Manufactured to ISO 9001 quality assurance standards
